Application/Control Number: 09/555,709

Art Unit: 1712

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1, 19, 20 and 22-37 are rejected under 35 U.S.C. 103(a) as being unpatentable over EP '177 alone or in view of Widder. The rejections are applied in the previous Office action. At page 3, line 19, EP '177 discloses liquid polyesters for use as a plasticizer in the degradable polyester hot melt adhesive. Liquid polyester would necessarily have a glass transition temperature below 60° C. Widder provides evidence that conventional polyester plasticizers have molecular weights below 10,000. Widder relates to modifying conventional polyester plasticizers to reduce their odor and at col. 4, lines 13-29, discloses that such polyesters plasticizers have molecular weights of about 500 to 8000. It would have been obvious to use a conventional liquid polyester having a molecular weight below 8000 as the liquid polyester plasticizer in the polyester hot melt adhesives of EP '177.

With respect to the rejection over EP '177 in view of Widder, while Widder specifically relates to polyester plasticizers that are used in a food environment, the reference generally relates to reducing the odor of polyester plasticizers. See col. 1, line 51-55. When formulated with plasticizers, the hot melt adhesives taught by EP '177 are used in the assembly of disposable articles such as diapers and hospital gowns. See page 4, lines 6-8. It would have been obvious to use the modified polyester plasticizers of Widder as the liquid polyester plasticizer in the polyester hot melt adhesives of EP '177 when using in the assembly of disposable articles designed to be worn in order to reduce the odor.

Application/Control Number: 09/555,709

Art Unit: 1712

Claim 21 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
